

## Machine Tool User Groups

### *Mazak invites you to the next Machine Tool User group.*

These highly successful events are designed to provide an open forum to discuss views of manufacturing strengths, opportunities and problems companies are facing today. The groups can then explore individual initiatives and solutions and have been found to increase asset utilization, reduce crashes and improve setup time. Regular meetings provide a cost effective way to seek out solutions to a wide variety of technical, educational and workforce issues.

The next meeting will be **March 5, 2013** at Mazak's Center for Multi-Tasking & Manufacturing Excellence, National Learning Center in Florence, KY.

We ask attendees to give a short presentation to members illustrating current challenges and successes.

Here are examples of past user group topics:

- Workforce Development: Finding and Training Operators and Programmers
- Understanding & using Mazatrol CNC built-in features
- Titanium and Hard Metals Machining
- Tooling and Workholding Technologies
- Probing Essentials
- Probe and ball bar accuracy tests and reports
- Volumetric Accuracy
- CAD and Post Processors
- Modern Materials and Processes
- Palletech Scheduling and Optimization

We're sure you have questions. Please visit our web page:
